Common Informatica Question and Answer Set for Beginners and Experts

1. What is an Informatica Mapping?

An Informatica mapping is a set of source definitions, transformations, and target definitions that define how data flows from source to target. It specifies the logic for data transformation and loading processes.

2. Explain the difference between Connected and Unconnected Lookup transformations.

- **Connected Lookup:** Used within a pipeline, it can return multiple columns and is connected directly to other transformations.
- **Unconnected Lookup:** Called separately via a LKP expression, it returns only one value and is used for lookup purposes without direct connection.

3. What are the types of transformations in Informatica?

- Aggregate Transformation
- Lookup Transformation
- Filter Transformation
- Sorter Transformation
- Router Transformation
- Joiner Transformation
- Expression Transformation
- Update Strategy Transformation

- Sequence Generator Transformation

4. How does the PowerCenter handle data flow?

PowerCenter handles data flow through mappings, which define the flow of data from sources to targets via transformations. These mappings are executed through sessions and workflows, enabling scheduled or real-time data processing.

5. What is a workflow in Informatica?

A workflow is a set of instructions that define how and when to execute tasks like sessions, commands, or email notifications. It orchestrates the complete data processing process.

6. Describe the concept of session in Informatica.

A session is a configuration object that executes a mapping. It specifies source and target connections, transformation logic, and other properties needed for data movement.

7. What is the difference between a maplet and a mapping?

- **Mapping:** Defines the entire data flow from source to target.
- **Maplet:** A reusable set of transformations that can be embedded within multiple mappings.

8. How do you handle data errors in Informatica?

Data errors can be managed through error handling options in transformations, reject files, or by configuring error logs. Also, the 'Error' and 'Reject' ports help capture problematic data for review and correction.

9. What is the purpose of the Repository in Informatica?

The repository is a metadata database that stores definitions of sources, targets, mappings, workflows, and other objects. It enables version control, reuse, and centralized management of Informatica objects.

10. Explain the concept of partitioning in Informatica.

Partitioning allows parallel processing of data by dividing data into multiple partitions, thereby improving performance and reducing execution time.

Advanced Topics and Frequently Asked Questions
