What Are Fish?

Definition of Fish

Fish are animals that live in water. They are part of a large group called aquatic animals, which means they spend most or all of their lives in water. Fish have gills, which help them breathe underwater, and fins, which help them swim.

Types of Fish

There are many different types of fish. They can be broadly divided into two main groups:

- **Jawless Fish:** These are some of the earliest fish, like lampreys and hagfish. They don't have jaws and usually have soft, jelly-like bodies.
- **Jawed Fish:** Most fish we see today belong to this group. They have jaws, scales, and fins. Examples include sharks, goldfish, and tuna.

Where Do Fish Live?

Freshwater Fish

Freshwater fish live in rivers, lakes, and ponds. They usually have adaptations that help them survive in water that has a low salt content. Examples include:

- Goldfish
- Carp
- Trout

Saltwater Fish

Saltwater fish live in the ocean or seas. They are adapted to survive in water with high salt content. Examples include:

- Clownfish
- Sharks
- Tuna

Brackish Water Fish

Some fish live in brackish water, which is a mix of freshwater and saltwater, like estuaries and mangroves.

How Do Fish Survive and Thrive?

Breathing Underwater

Fish breathe using gills, which are special organs that extract oxygen from water. Water flows over the gills, and oxygen is absorbed into the fish's blood.

Moving in Water

Fins help fish move smoothly through water. Different fins have different jobs:

- **Caudal fin:** The tail fin helps fish move forward.
- **Pectoral fins:** These fins help with steering and balance.
- **Pelvic fins:** They help with stability.

Eating Habits

Fish are diverse in what they eat:

- Some are herbivores and eat plants or algae.
- Others are carnivores and eat smaller fish or insects.
- Some are omnivores and eat both plants and animals.

Protection and Camouflage

Many fish have special features to protect themselves:

- **Camouflage:** Some fish blend into their surroundings to hide from predators.
- **Spines and scales:** These make them harder to eat.
